

CPR For Health or PE Classes

Saving lives just got easier...In the past, many schools haven't had the curriculum or resources to train their students. But now, with special instruction materials by HeartSaving Solutions, there are classes that fits your school's format and budget. Best of all, we've made it easy to implement this training into your existing health curriculum. How does it work? Students will access the HeartSaving Solutions class through a link on your institution's website. After completing the online lessons, students take the test and we send you the test scores for each student. Remember...Students should be trained every two years to stay up to date on their CPR/AED certification. We recommend you implement this training for every 6th, 8th, 10th and 12th grade student. We make it easy to train your students, and we give you options starting at only 8.00/student. [Get More Information](#) [Print a brochure](#) [Try Demo](#)
